Indoor Wi-Fi 6 (802.11ax) Access Point

OVERVIEW

Homes face more extreme demands on their wireless infrastructure than ever before.

Whether working out of a home office or streaming films & TV, demand for high-bandwidth applications and content is unrelenting. And they need strong, reliable connectivity. Your network needs to handle the task without missing a beat.

The RIVI RV35 delivers consistent, reliable Wi-Fi 6 (802.11ax) wireless networking at an affordable price. The AP features patented technologies for performance optimisation and interference mitigation found in our premier access points, delivering superior user experiences at extended ranges. But it provides them in an ultracompact form factor.

Also, wireless requirements within homes are expanding beyond Wi-Fi with BLE, Zigbee and many other non-Wi-Fi wireless technologies resulting in creation of network silos. Homes need a unified platform to eliminate network silos. The RIVI RV35 is equipped to solve these challenges with a USB port supporting an optional pluggable BLE and Zigbee IoT module.

The RV35 Wi-Fi 6 AP incorporates patented technologies in the RIVI Wi-Fi portfolio.

- Extended coverage with BeamFlex utilising multi-directional antenna patterns.
- Improved throughput with ChannelFly®, which dynamically finds less congested Wi-Fi channels to use.

The RV35 provides an ideal combination of features and performance for home environments. Additionally, it supports up to 256 clients and 16 SSIDs per AP.

Whether you're deploying ten or ten thousand APs, the RV35 is easy to manage through RIVI's appliance and virtual management options.

Indoor Wi-Fi 6 (802.11ax) Access Point

ACCESS POINT ANTENNA PATTERN

BeamFlex+ adaptive antennas allow the RV35 AP to dynamically choose among a host of antenna patterns in real-time to establish the best possible connection with every device.

This leads to:

- Better Wi-Fi coverage
- Reduced RF interference

Traditional omni-directional antennas, found in generic access points, oversaturate the environment by needlessly radiating RF signals in all directions. In contrast, the RIVI BeamFlex+ adaptive antenna directs the radio signals per-device on a packet by-packet basis to optimise Wi-Fi coverage and capacity in real-time to support high device density environments. BeamFlex+ operates without the need for device feedback and hence can benefit even devices using legacy standards.

BENEFITS

Latest Wi-Fi Standards

The RV35 access point (AP) support the latest Wi-Fi 6 (802.11ax) technology.

Stunning Wi-Fi Performance

Patented technologies for performance optimisation and interference mitigation delivers extended coverage and superior user experience.

IoT Ready

Eliminate siloed networks and unify Wi-Fi and IoT technologies into one single network with the addition of an optional USB module to allow for the incorporation of any future wireless technologies.

Mesh Networking

Dynamically create self-forming, self-healing network mesh with patented SmartMesh technology reducing expensive cabling, and complex configurations by checking a box.

Affordable Enterprise-grade Performance

The RV35 delivers unprecedented price/ performance offering extended range at an affordable price.

Keep Existing Switches and Cables

Designed to operate on existing PoE switches and CAT 5e cabling to minimise costly power infrastructure upgrades.
